No.	Name of materials	Quantity
	The Jaw stocks should be of light weight, strong, made of cast steel and heavily ribbed. A separate top cap is fitted to facilitate the renewal of bearings. The joints are machined and bolted together. The shaft should be of Nickel chrome steel, double heat treated and correctly grounded to fine limits. The bearings—The special Bronze alloy bearings fitted into machined seats. Wearing parts—The jaws are of Manganese steel, reversible and for end, having curved faces for greater output. Fly Wheel—The fly wheel must be of 36" diameter × 7" wide. A loose pulley be fitted at either end of the shaft. The speed of the Machine is 310-330 R.P.M. which is the speed at which the best results are obtained.	
2	Stone Crushers— The body must be of a Massive solid steel casting. Faces inside the body are machined to centralise the jaw stock when it works. Sides have to be provided with the removeable bearings. The Jaw stock must be heavily ribbed and is machined at the sides to fit inside the Body to present side to side movement. The Shaft is of a large diameter made of 40/50 tons tensile steel accurately turned and well polished. Heavy machined balance fly wheel must give steady running without vibration and loose pulley should be provided. The bearings should be of easily removeable, being white metal run into steel shells which fit in the bored seating in the body jaw stock. The bottom half of the jaw stock bearing is adjustable when wear takes place. Wearing parts—The Jaws are reversable end for end. Removable Manganese steel loggle liners are provided to Jaw stock and grove block. Stone Crusher Model E.D. Size of Mouth—14"×7" Approximate out-put—5 to 7 tons. Size of fly wheel pulley—29"×5" Power required to drive –9-10 H.P. (B H.P.)	Six
